A rich learning environment at Wyndham Central

Wyndham Central College is the first secondary school in Australia to attain a 'Site of Distinction' AVID Certification.

Wyndham Central College is proudly preparing the leaders of tomorrow to be agile, innovative and creative problem solvers, through a range of excellent education programs and learning opportunities and teaching strategies.

AVID is a schoolwide program that underpins how staff teach and how students learn. While all students at Wyndham Central College are AVID students, it is also offered as an elective from year 9 to year 12.

AVID assists all students to believe that they can achieve. It provides students with the tools, skills and knowledge to be successful students, to be university, work and career ready and to be active global citizens.

Additionally, the STEM Academy challenges and equips students with skills to solve authentic problems for the complex world around them. Students are presented with mathematical and scientific concepts in ways that challenge their understanding of these key learning areas. They manage projects and work collaboratively in teams using advanced technology and engineering concepts to find solutions to problems presented.

STEM, a program available in years 9 and 10 activates curiosity, challenges thinking and promotes problem solving.

A variety of rewarding programs at Wyndham Central College will enrich your child's education and help to prepare them for their future. (Supplied)

Another rewarding concept at Wyndham Central is its Enrichment Program, providing an optimal learning environment to address the unique social, emotional, and academic needs of students that display a talent in a particular area.

The program extends enrichment opportunities for students both within and beyond the classroom. All students in the Enrichment Program develop a project over the course of each year. The project centres on developing an authentic product or performance and allows students to build excellence in a real-world context.

The Enrichment experience is extended to students at the college through their participation in the Victorian High Ability Program for those who have been selected to this program by the Department of Education. The Enrichment Series is offered for other students who show high ability in learning areas including English, Science, Math, The Arts, Sport and Health, Humanities, Technology and Languages.

Wyndham Central College's mission is to develop achievement opportunities and prepare all students for post-secondary education, skills development and work readiness so they can participate in a global community as productive citizens.

Wyndham Central College is located at 101 Shaws Road, Werribee. For more information, visit www.wyndhamcentralsc.vic.edu.au.
